

SCULPSURE[®]

VS. FAT FREEZING

Even with diet and exercise, most people have stubborn pockets of fat that seem impossible to lose. SculpSure's non-invasive fat reduction technology has been clinically proven to reduce the number of fat cells in the treated area in just 25 minutes*. Other fat freezing technologies remove heat from the fat cells, freezing and crystalizing them, which also damages their structural integrity. Though the two technologies provide results, SculpSure has several advantages over fat freezing.

SCULPSURE

FAT FREEZING

Treatments take just 25 minutes per area.

TREATMENT TIME

Treatments take anywhere from 35 - 60 minutes per area¹.

Treatments are customized for a variety of shapes and sizes.

PATIENT SELECTION

Treatments are limited by how much fat can be suctioned into the applicator.

SculpSure is considered a well-tolerated treatment^{2,3}.

COMFORT

Post treatment massage is required which can be uncomfortable.

Side effects are mild and temporary in nature, with most common being tenderness, swelling and tissue firmness.

SAFETY PROFILE

Typical side effects include temporary redness, swelling, blanching, bruising, firmness, tingling, stinging, tenderness, cramping, aching, itching, or skin sensitivity. Sensation of fullness in the back of the throat after submental area treatment.¹

The feathering of heat provides a natural-looking result.

RESULTS

Due to the technology, unevenness in the treatment area has been reported.

Clinical studies have shown 83% to 100% patient satisfaction rate.^{2,3,4}

PATIENT SATISFACTION

Clinical studies have shown 73% to 93% patient satisfaction rate.^{5,6,7}

The SculpSure[®] device is a non-invasive laser body contouring system intended to permanently eliminate fat cells through non-invasive lipolysis of the abdomen, love handles (flanks), back, inner and thighs and under the chin (submental). Individual results may vary and are not guaranteed. SculpSure[®] treatments are not intended for weight loss results or for people who are obese. Mild side effects may occur including temporary tenderness, swelling or tissue firmness in the treatment area. Please consult with your physician to see if SculpSure[®] treatments are right for you.

*Optimal results are generally achieved through a series of treatments.
